

Nutritional Supplement for Horses

Livestock Prebiotic Supplement

Excell™ is a microbial fermentation product available in dry or liquid for working and performance horses. Excell™ helps restore and maintain a healthy intestinal microflora necessary for optimal intestinal integrity, digestion and overall equine health.

Excell™ has been shown to help:

- Maintain optimal digestive bacteria (the good bugs)
- Digestion and absorption
- Strong immune function
- Reproductive efficiency
- Overall performance and health

Excell™ helps horses avoid digestive issues

Excell™ is produced from a specific strain of Lactobacillus that effectively nurtures and maintains the microbial balance in the digestive tract.

This healthy balance of the horse's natural microflora not only protects against invading pathogenic organisms, like E. coli, salmonella and clostridium – but also helps in maintaining a good intestinal environment, which helps horses to avoid digestive problems commonly affecting them, such as colic – a condition that can be caused by overeating, excess gas production or blockage of the intestines.

Adding Excell™ to your animal's diet is a proven way to maintain a healthy digestive system necessary for your horse's overall health and performance.

Feeding Rate:

- Foals and weanlings: **1/4 cup/head/day**
- Yearlings and older: **1/3 cup/head/day**
- When under stress or digestive upset, **double the recommended rate**

Proven Results

Excell™ has been used in livestock diets for over 30 years with proven results. Contact your Key Ag representative for trial information.
