Prebiotic Supplement

Excell is a dietary supplement comprised of non-viable lactobacillus cells, bioactive metabolites and fermentation by-products produced by a proprietary process.

Microbial Growth Stimulant

Excell helps to populate, restore and maintain a healthy population of indigenous intestinal microflora in the digestive system of all animals. Results and research show that an increased level of gut microflora can have positive health and production related responses.

Better Health

Research shows that improved gut health has positive impacts on overall health. **Excell** is designed to keep the rumen and monogastric animals functioning at a high level from the inside.

Balancing the Gut

The unique profile of cell metabolites and organic compounds in **Excell** provides both ruminant and monogastric animals a nutritive source that stimulates and helps balance gut digestion.

Available In
300g and 60g tubes paste
