

## *Custom Performance Pellet -Calf Weaning-*

### **Get Cattle Started Right With Excell**

Receiving and backgrounding cattle are usually stressed from handling and shipping and getting them started on feed safely is critical. When cattle are started on feed right, they usually perform better for the remainder of the feeding period.

The primary objectives for weaning and receiving cattle are to stimulate feed intake, optimize rumen function and to develop a strong immune function.

### **Excell Performance Pellet Enhances Intake and Rumen Function**

Stimulating and maintaining consistent intake is important for healthy, high performing cattle and providing the lowest cost of gain. Excell will help stimulate feed intake and optimize rumen function following the stress of shipping and receiving. This is achieved by optimizing rumen microflora populations resulting in more nutrient intake that supports growth and development as well as the nutrients needed for a strong immune system and long-term animal health.

Specific benefits of good rumen function and improved feed efficiency:

- **Consistent intake**
- **Feed efficiency**
- **Average daily gain**
- **Overall health**

### **Feeding Rate:**

Excell Performance Pellet Calf Weaning can be top dressed or blended into the feed mix to provide 3-5 pounds per head per day.

- For best results feed 5 pounds for 45 days based on University of Idaho studies\*
- Feed during times of stress or sickness

## Custom Performance Pellet -Calf Weaning-

### Excell Custom Performance Pellet Calf Weaning Is All-Natural

The Excell Weaning Pellet contains 16% protein and is formulated with all-natural ingredients for optimum digestion and efficiency. The pellet also contains a *Lactobacillus* fermentation product that provides nutritional benefits for the animal's digestive system needed during the times of stress.

The *Lactobacillus* fermentation products unique nutritional and bio-active compounds support:

- **healthy balance of digestive bacteria in both the rumen and intestine**
- **Improved gain and feed efficiency\***
- **health and integrity of the gut**
- **the immune system and function**

### Excell Pellet for Weaned calves, Receiving and Backgrounded Cattle

Excell will support and maintain good rumen function and feed efficiency when you need it most during weaning, shipping and backgrounding periods:

- Get weaned calves and stressed on feed
- Support consistent intake and performance
- Reduce digestive issues due to stress
- Maintain immune function and health
- Maintain optimal gain and performance

### Proven Results

Excell has been used in livestock diets for over 30 years with proven results.
